

PapaThaiGG Master Checklist

Owner: PapaThaiGG (rdongoodman) **Updated:** August 15, 2026 — evening session (Elgato live · Game+Pug OBS · Stream Deck scene buttons working) **Repo:** GitHub/PapaThaiGG/docs/ **Master PDF (open first):** Desktop → 00 - PUG PROJECT MASTER GUIDE (Sal).pdf **Ordered build steps:** Desktop → PUG_PUGSAN_STEP_BY_STEP_BUILD.pdf · repo docs/PUG_PUGSAN_STEP_BY_STEP_BUILD.html **Also:** Desktop\PapaThaiGG Plans\ · repo docs/PUG_PROJECT_MASTER_GUIDE.pdf **Ask Mozart:** *"update master guide PDF"* after big milestones Four separate tracks: **Website** · **Pug/Pugsan avatars** · **Discord** · **Sal's personal avatars** **Philosophy:** Fun first, retired pace, no rush. Profit later → more volunteering + gear + fun. ---

Dual-PC map (streaming PC = Pug home)

|| **Gaming PC** | **Streaming PC** | |--|-----|-----| | **Job** | Game only → capture out | **Pug / AI / Warudo / OBS** | | **CPU** | i9-12900KF | i9-10900KF | | **RAM** | 32 GB DDR5 | 64 GB DDR4 | | **GPU** | RTX 3080 Ti | RTX 3080 | | **Hostname** | DESKTOP-JCVJ6HR | RANDYS_PC_TH | **Pug files (streaming PC):** OneDrive\Desktop\App ideas\PTGG\PugAI\ · talk via Desktop **Talk to Pug.bat** ---

What's next — do in this order (Aug 15 evening)

Sal can stop anytime · pick up tomorrow · one step at a time.

A — Easy hardware (next session — ~30 min total)

- 1. ☐ Stream Deck **Switch Profile** button (Default ↔ **PapaThaiGG Stream**)
- 2. ☐ **Logitech Brio** plug-in test (optional — Sal rarely on cam)
- 3. ☐ **Blue Yeti** quick mic test (USB headset stays main mic)
- 4. ☐ **Cable tidy** — gaffer tape / velcro ties on desk + Elgato USB run

B — Fun with Pug (Phase C — the real co-host stuff)

- 5. ☐ Full-stack **Talk to Pug** test on **Game + Pug** OBS scene (type → Ollama → TTS → Warudo + game visible)
- 6. ☐ **Mic talk** — Whisper/STT so you don't type
- 7. ☐ **"Pug, be quiet until I call you back"** — mute flag
- 8. ☐ **Chat** → **Pug** — Twitch/YouTube via Streamer.bot → Ollama → TTS

C — Optional polish (whenever — don't block streaming)

- 9. ☐ Rename OBS scenes if still **Scene 1 / Scene 2** → **Game only / Game + Pug**
- 10. ☐ Crop/Pad Warudo capture edges in OBS
- 11. ☐ **Spout2** for Warudo transparency (replace Chroma Key later)
- 12. ☐ **Cam+Game+Pug** scene when Brio is ready
- 13. ☐ Lock final TTS voice for viewers (**HFC Male** default in **Talk to Pug.bat** is OK for now)

Key paths (from step-by-step guide): | What | Where | |-----|-----| | ALPHA.vrm | ... \PTGG\ALPHA.vrm | | Streamer.bot (Phase C) | Desktop → Streaming\Streamer.bot-x64-1.0.4\ | | Gaming PC archive (old home) | D:\PTGG\ — Blender ... \Blender Pug and Pugsan avatar builds\Pug 1.blend · Pugsan art under brand build / Mascot Files | | Brain choice | **Ollama local** = locked path · Dolphin optional later · cloud APIs only if selling to folks without GPUs | ---

Brand vision (PapaThaiGG · Pug · Pugsan)

PapaThaiGG (Sal): Retired-pace gaming/stream brand — fun first, Thailand expat vibe, community on Discord + website. **Pug:** Wholesome AI co-host in the **Android robot** body (ALPHA.vrm). One **Ollama brain** — talks on stream, later in Discord + website chat. Default personality: **sweet, upbeat, loyal**; light humor OK; not mean or irritating. **Pugsan:** Same brain, **samurai pug** body — second mascot for variety (Phase H). **Endgame:** Pug/Pugsan live on stream → chat everywhere → remember viewers → welcome-back → optional DMs → sell toolkit to other streamers (low priority, after Sal proves it's fun). ---

Endgame (technical)

Stream: Pug live co-host (Ollama + Warudo + TTS + OBS). Sal cam optional — **Game + Pug only** layout OK. **Everywhere (after stream proves fun):** Same brain on **Discord, website chat**, viewer **memory/welcome-back**, optional **DMs**. **Pugsan** second body. **Sell product** to other streamers later (low priority).

Build order (do not skip)

1. **Phase B** — OBS (now) · Warudo scene **Pug (Android)** saved ✓ 2. **Phase C** — Stream chat → Pug · mute · walk on/off 3. **Phase D** — Dual-PC Elgato + Stream Deck — **MOSTLY DONE** ✓ (Aug 15) · one easy hardware item left 4. **Phase C** — Smart co-host (chat · mic · mute) — **NEXT** after easy hardware 5. **Phase E** — Discord bot 6. **Phase F** — Website chat widget 7. **Phase G** — Remember viewers · "Where you been?" welcome-back · DMs where allowed 8. **Phase H** — Pugsan samurai 9. **Phase I** — Product / sell (optional)

Sal's extra goals (logged Aug 9)

- ☐ Pug remembers users across stream + Discord + website

- ❑ Welcome back with exact time away (*"30 days, 2 hours, 16 minutes..."*)
- ❑ Global stream shout when returning viewer joins live
- ❑ Private one-on-one messages (Discord DMs, website; Twitch/FB/X limited)
- ❑ Pug + Pugsan both available for chat everywhere
- ❑ 3D on website/Discord = nice-to-have; text/voice first
- ❑ Social media full bots = unlikely · low priority
- ❑ Sell toolkit to gamers/VTubers · one-time or monthly TBD · **after proof on Sal's stream**

Personality modes (future — logged Aug 9 evening)

- ☑ **Default:** wholesome / sweet / hype co-host (done in Modelfile)
- ☑ **Nickname list locked** — see **Nickname Bible** section below
- ❑ **Game-aware nicknames:** use secondary names on hype moments when game hooks exist (Phase C)
- ❑ **Modes to add later:** funny · scared · light sarcastic (not irritating) · extra-wholesome · hype beast · etc.
- ❑ **Switch by voice while streaming:** e.g. *"Pug, wholesome mode"* · *"Pug, funny mode"* · *"Pug, snark mode"* (light only)
- ❑ **Switch by Steam Deck:** map modes to buttons on Sal's **32-button Stream Deck** (one button = one personality)
- ❑ **Implementation idea:** separate Ollama models (Pug-wholesome, Pug-funny, ...) **or** one model + system prompt swap in Pug_Brain.py
- ❑ Pugsan can share same mode system when samurai body ships

Nickname Bible (Pug & Pugsan call Papa — never "Sal")

Primary (most of the time — brand core): Papa · Papa Thai · Papa T **Secondary (hype, wins, funny moments):** PT · Big guy · Boss · Chief · Pops **Rare flavor:** Khun Papa (Thai respect — like Kun Randy) **Pugsan only — occasional Japanese:** Papa-san (パパさん) · Bossu (ボス) · Chifu (チーフ) · Aniki (兄貴) · Denka-sama / Honored Papa (殿下様) · Khun Papa (クン · パパ) **Never:** Sal · old man · grandpa · geezer · elder · dude · age-mocking insults **Game-aware use (Phase C+):** secondary nicknames on big wins/clutches; primary for normal chat.

Nickname usage percentages (tune later — logged Aug 9 late evening)

Set target **weights** in Modelfile or Pug_Brain.py so nicknames feel natural, not random: | Nickname | Suggested starting weight | Notes |
 |-----|-----|-----| | **Papa** | ~40% of primary uses | Most common — short and warm | | **Papa Thai** | ~35% of primary uses | Brand name — use often | | **Papa T** | ~25% of primary uses | Casual hype | | **Secondary** (PT · Big guy · Boss · Chief · Pops) | ~15–20% of **all** replies | Hype moments, wins, banter | | **Khun Papa** | ~2–5% | Rare Thai flavor | | **Pugsan Japanese** | ~5–10% when Pugsan active | Rare · special moments |

- ❑ Papa + Mozart pick final percentages after more live testing
- ❑ **Percentages shift by game mood** — doing poorly vs doing great (see below)
- ❑ Lock one **TTS voice** for stream (viewers stay consistent) · **not** multiple voices on stream
- ☑ **Voice rankings (Aug 15, 2026 — Sal audition):**

1. **HFC Male** Piper (US) — **#1** 2. **Joe** Piper (US) — **#2** 3. **Northern English** Piper (GB) — **#3** 4. **Ryan** Edge — **confirmed #4** (Sal remembered why he liked it) 5. **Christopher** Edge 6. **Liam** Edge 7. **Roger** Edge 8. **Guy** Edge 9. **Thomas** Edge **Dropped:** Alan · John · Lessac · Norman **Stream lock:** one voice once live (Piper preferred — HFC Male leading)

- ☑ **Edge audition bats fixed** — wrong %LOCALAPPDATA\Programs path corrected on Desktop · Roger = en-US-RogerNeural · Thomas = en-GB-ThomasNeural — **COMPLETED (Aug 15)**
- ☑ **HFC Male** default in Talk to Pug.bat (no env override needed) — **COMPLETED (Aug 15)**
- ☑ **MediaPipe notes (review later):** Assets → **MediaPipe Tracker** = scene webcam engine · **Characters** → **Pug** → **Motion Capture** = **No** = correct for TTS/audio lip-sync · tracker **Face/Hand/Pendulum** = **No** + **Show Camera** = **No** = idle/safe · **Character Freeze** = **No** (Freeze on Pug freezes the avatar, not the tracker) · deleting tracker asset = **this scene only** (Sal avatar later needs own scene or re-add tracker) · minus/delete may respawn (Warudo blueprint) — OK to leave asset idle · full mocap phase later when corner-cam or gestures wanted
- ❑ **More Piper to try (optional):** southern English · amy · libritts — only if still hunting after Joe vs Northern English
- ❑ **Multilingual (near end — optional / may discard):** Pug/Pugsan reply in viewer language (YouTube/Twitch/Discord/website text) · personal vs global · spoken non-English needs multilingual TTS · integrate with Discord/website translators · Warudo N/A for chat
- ❑ **Friend recordings:** quiet 1–2 min with phone OK · lunch-table chat = lower quality · permission required
- ❑ **Lock voice once streaming starts** — no voice changes unless strong viewer feedback (brand consistency)
- ❑ **Viewer feedback system:** stream polls · website · Discord — "like Pug voice?" yes/no · other mascot feedback
- ❑ **Stand out vs common voices:** avoid overused Edge defaults · avoid ElevenLabs "Josh" presets · pick less-common Piper models
- ❑ **Custom voice path (before paid):** record **British/Canadian expat friends** in Ao Nang (with permission) → clone for Pug/Pugsan
- ❑ **Papa voice clone + British cadence blend** — test Coqui XTTS · free · quality TBD
- ❑ **AI "generate voice from nothing"** — research ElevenLabs custom · cost · one-time vs monthly · only if free paths fail
- ❑ **Fully unique studio voice — LAST RESORT:** pro voice actor or premium AI studio · document cost + licensing
- ❑ **Paid TTS research (later):** ElevenLabs · Play.ht · monthly vs one-time · stream/commercial ToS
- ❑ **Volume tune:** Roger felt loud — PUG_VOICE_VOLUME in Pug_Brain.py (now 0.82)

- ☐ **Pause / hesitancy tune (later):** shorter one-sentence replies · SSML · merge lines · Piper
- ☐ **TTS speed (later):** local Piper · pre-warm · on-screen “Pug is thinking...”
- ☐ **Discord (Phase E):** text first · Pug/Pugsan voice replies later (TTS clips · VC)
- ☐ **Website (Phase F):** text chat first · optional browser voice · Pugsan JP/EN voice modes

Game-mood nicknames & lines (future — logged Aug 9 late evening)

Pug’s **tone and nickname pick** change with how the run is going (via game hooks, your voice, or Stream Deck): | Game mood | Nickname vibe | Example lines | |-----|-----|-----| | **Rough night / losing** | Stick to **primary** — Papa, Papa Thai, Papa T · gentle, not mean | “Papa, what’s happening tonight? We’ll turn it around.”* · “You got this, Papa T — shake it off.”* | | **Crushing it / big win** | More **secondary** + rare flavor · hype energy | “Boss, that was clean!”* · “Khun Papa kicks butt!”* · “Papa-san kicks butt!”* (Pugsan) | | **Normal / mid game** | Default percentage table above | Wholesome co-host banter |

- ☐ Tie mood to game signals (deaths, streak, score) or Papa saying “rough night”* / “we’re cooking”*
- ☐ Percentages are **starting guesses** — tune after live streams

Custom AI voices & “impersonations” (future · legal caution)

Idea: Funny occasional voice styles — accent vibes, character energy, custom cloned voices. **Legal / platform reality (not legal advice):** - **Celebrity impersonations** (Sean Connery, etc.) on a **public stream** = risky — publicity rights, platform rules, monetization issues. **Not recommended** for PapaThaiGG streams. - **Safer paths:** original Pug/Pugsan voices · generic accents/archetypes (“wise mentor”*, “hype announcer”*) · **your own** voice clone · licensed voice packs where terms allow streaming.

- ☐ Research TTS options: Edge TTS · Piper · Coqui · ElevenLabs (check ToS + commercial/stream use)
- ☐ **One default stream voice** for viewers + optional **non-celebrity** style modes via Stream Deck (if legal and ToS-safe)
- ☐ **Skip celebrity impersonations** unless lawyer/licensed — note for future: probably forget this idea for public stream
- ☐ Private offline jokes in bat file only = still gray area — treat as **no** for brand safety
- ☐ **Mixed/original voice design** — blend or generate a unique Pug voice (not copying one celebrity)
- ☐ **Papa voice clone** — optional funny mode · check ToS + stream use · probably not default on stream
- ☐ **Pugsan dual voice modes (Phase H):** (1) Japanese-primary — mostly JP, little English · (2) Japanese-English bilingual mix
- ☐ **TTS speed:** neural Edge voice has ~1–4s delay (internet) · first reply slower · improve later with local Piper or pre-cache

VRM gestures, dances & expressions (future — Pug + Pugsan)

- ☐ **Warudo animations** — idle · wave · hype dance · sad slump · victory pose · walk on/off
- ☐ Trigger dances/gestures from Stream Deck · game events · chat · TTS timing
- ☐ **Pugsan build:** T-pose art → 3D → rig → **Pugsan.vrm** with same gesture library
- ☐ Lip-sync to TTS (later polish) · eye/mouth expressions in Warudo
- ☐ Custom animation clips for ALPHA + Pugsan bodies in Warudo

Game awareness — what’s possible (logged Aug 9 evening)

| Level | What happens | Realistic? | When | |-----|-----|-----| | **Easy** | Pug reacts to **chat, your voice**, or **Stream Deck button** you press | ✓ Yes | Phase C | | **Medium** | Pug reacts to **game events** via hooks/APIs for specific games you play | ✓ Yes, per-game | Phase C–D | | **Hard** | Pug **watches the screen** like a human (AI vision on game capture) | △ Experimental — slow, GPU-heavy, not reliable alone | Future test | | **Animations** | Victory dance, sad slump, hype bounce in Warudo | ✓ Yes — **triggered** by any event above | Phase C | **Honest answer:** Pug won’t silently “see” you lose a fight and react **by magic** on day one. We **build event pipes** (chat → you → hotkey → game hook → vision). Each pipe can fire Ollama + TTS + Warudo animation. **Chat + voice + Steam Deck + game hooks** is the reliable path first.

Vision experiment — “Pug watch the game” (future · fun to try · not now)

- ☐ **Experimental:** AI vision on game capture — Pug/Pugsan “watch” screen and react (slow, GPU-heavy, may not work well — OK to turn off forever if bad)
- ☐ **Steam Deck toggle ON:** before a big fight/group battle — tap button → vision mode starts watching
- ☐ **Steam Deck toggle OFF:** tap same (or second) button → vision mode stops — **not on all the time** (saves GPU)
- ☐ Works **alongside** reliable pipes (chat · mic · game hooks) — not a replacement
- ☐ If too slow or flaky: disable feature, keep the rest — still a fun experiment when time comes
- ☐ Same toggle idea for Pugsan when samurai body ships

SECTION 1 — Website (papathaigg.com)

When to work on this: After avatar/stream phases prove fun — or small copy fixes anytime. **Do not block Pug build for website polish.** **Site review (Aug 10, 2026):** Foundation is solid — tactical vibe, good page split, Expat Intel is strongest teaching page. Gaps = brand accuracy copy + more Sal/Thailand depth over time.

Done

- ☒ Mobile hero fix — readable on phones/tablets (Aug 6, 2026)

- ☒ Button padding / equal sizes for Expat · Field Guide · Meet Pug
- ☒ Live on GitHub Pages + Cloudflare
- ☒ Multi-page structure: Live · Discord · Loadout · Expat Intel · Field Guide · Meet Pug
- ☒ Expat Intel: ping table, visa breakdown, 3km villa case study, real cost numbers
- ☒ Field Guide hub: Krabi cards + Pug → Pugsan evolution block

Fix when ready — brand accuracy (small text, big trust)

Do these before Pug goes public on stream/site — no redesign needed.

- ☐ **Meet Pug tone:** Change “sarcasm-fueled commentary” → **wholesome, loyal, family-friendly** co-host (match Modelfile)
- ☐ **Meet Pug hardware:** Remove “RTX 5090 / The Beast” → **3080 Ti gaming PC + 3080 streaming PC** (dual-PC truth)
- ☐ **Homepage specs:** Fix RAM line — **32 GB DDR5 (gaming) + 64 GB DDR4 (streaming)**, not “64GB DDR5” as one box
- ☐ **“Under Construction” header:** Soften giant H2 on photos/videos section → small badge e.g. *“Gallery growing — Jan 2026”*; keep fun section names (In-Country Intel · Combat Footage · Base Camp)
- ☐ **Meet Pug expectations:** Add honest phased line — *“Live on stream first · Discord & site chat coming soon”* (don’t overpromise before Phase F)

Add over time — aligned with vision (fun + teach + community)

Retired pace — one item at a time is fine.

- ☐ **One-sentence mission under hero** — e.g. retired-pace gaming from the Andaman coast · real Thailand intel · zero cash grab · squad welcome
- ☐ **Light “About Papa” beat** — 35+ years travel · military · worldwide experience · why Ao Nang (short block, not a memoir)
- ☐ **Field Guide as real chapters** — each Krabi card → its own page over time:
 - [] Ao Nang day-to-day (markets, scooter, rainy season) - [] Railay / Phra Nang (“postcard office” story) - [] Island day trips (4 Islands, Hong, etc.) - [] Beyond Krabi — Lanta, Phuket, Malaysia runs, wider SE Asia
- ☐ **Homepage trio clickable** — In-Country Intel → recon · Combat Footage → live/YouTube · Base Camp → Discord
- ☐ **More Sal voice in copy** — warm, self-deprecating, “building for fun” (like recon Blender joke); balance tactical skin with hangout feel
- ☐ **Pugsan tease on Meet Pug** — one line: same brain, samurai pug body, joins squad later (Phase H)
- ☐ **When Pug ships — honest status on site** — online/offline · “talk on stream now” · “site chat soon” · update as features ship
- ☐ **Optional: “This week at Base Camp”** — one homepage line: what you’re playing · one Thailand tip · stream day (only if it stays fun, not a chore)

Phase F — Website chat (when avatars prove fun)

- ☐ Meet Pug / recon pages match what Pug can **actually** do (update as features ship)
- ☐ **Pug chat widget** on Meet Pug — talk to Ollama; show online/offline honestly
- ☐ Pugsan page updates when samurai avatar ships

Optional later (website)

- ☐ SEO / industry guides (post-launch)
- ☐ Download / stream links hub refresh when going live regularly
- ☐ Persistent nav on subpages (nice-to-have)

Do NOT change (by design)

- No donation / “buy me a coffee” pressure — not your brand - Keep tactical aesthetic — distinctive and on-brand - No rush for Pug 3D on web — text/voice first (Phase F) - Don’t bloat homepage — mobile readability is good now ---

SECTION 2 — Pug & Pugsan (independent AI co-host avatars)

Not Sal. One **Ollama brain**, two bodies: **ALPHA robot** + **Pugsan samurai pug**.

Vision

- Independent AI mascot — walks on, talks, reacts, walks off - Chat + voice commands + in-game moments (phased) - Transparent Warudo layer over game in OBS - Same brain later for Discord + website chat

Done

- ☒ Blender 5.2 + VRM · ALPHA.vrm · Warudo scene (gaming PC prototype)
- ☒ **Streaming PC (Aug 9, 2026):** Ollama · llama3 · custom **Pug** model · Python 3.12
- ☒ Pug_Brain.py works · **Talk to Pug.bat** on Desktop

- ☒ Modelfile → **wholesome** personality rebuilt (no snark / no "ugh") · tested "Hey, pal" ✓
- ☒ VB-Cable installed · OBS installed
- ☒ Master guide PDF on Desktop + PapaThaiGG Plans\
- ☒ Pugsan reference art in PTGG brand build folders
- ☒ **Lesson learned:** Windows default output must stay on **USB headset** — not CABLE Input (YouTube + OBS meter fix)

Phase A — Brain (Ollama + TTS) — DONE on streaming PC

- ☒ Pull Llama3; custom **Pug** from Modelfile
- ☒ Wholesome 1–2 sentence replies in Modelfile (+ example messages)
- ☒ Windows TTS via Pug_Brain.py (David voice · prints "Speaking now...")
- ☒ **Hear Pug in headset + OBS meter** — Python → CABLE Input · OBS → CABLE Output · Monitoring Enabled ✓ (Aug 9)
- ☒ Identity fix — Pug speaks **as Pug**, not as Papa ("Pug here, ready to stream with you" ✓)
- ☐ Upgrade TTS to nicer single voice (later — one voice for viewers)
- ☐ Tune nickname usage percentages (see Nickname Bible)
- ☒ Test with game open on gaming PC — Elgato + OBS live feed ✓ (Aug 15)

Phase B — Robot live (Warudo + OBS) — DONE (Aug 9 + Aug 15 refresh)

- ☒ Warudo: ALPHA.vrm · **Pug (Android)** · Orbit camera · Focus Character
- ☒ Transparent background ON · Render Environment OFF
- ☒ Scene saved: **Pug (Android)**
- ☒ OBS: Window Capture → Warudo · Pug small in corner ✓
- ☒ OBS: **Pug Voice** — Audio Input Capture → **CABLE Output** ✓
- ☒ Route TTS: Volume mixer → **Python** → CABLE Input (per-app)
- ☒ Hear Pug in headset (OBS Monitoring Enabled · USB Audio Device)
- ☐ Idle animation picked (optional polish)
- ☐ TTS → lip-sync / mouth (later polish)
- ☐ Crop/Pad Warudo capture edges (optional polish)
- ☐ **MediaPipe Tracker:** not required for TTS Pug — **Show Camera = No** + Face/Hand off · leave asset in scene OK · delete only affects current scene · see MediaPipe notes above
- ☒ **Game + Pug** scene — OBS collection **PapaThaiGG Game + Pug** · Elgato game layer + Warudo Pug · voice test ✓ — **COMPLETED (Aug 15)**
- ☒ Warudo in OBS: **Warudo 0.15.0** window · Capture Method **Windows 10** · Chroma Key Sim **1** / Smooth **1** (transparent over game) — **COMPLETED (Aug 15)**
- ☒ **Game only** scene — Pug source hidden · **Pug Voice** muted · game full screen — **COMPLETED (Aug 15)**
- ☐ Scene preset still to add: **Cam+Game+Pug** (Brio later)

Phase D — Dual-PC Elgato + Stream Deck — MOSTLY DONE (Aug 15)

Elgato + OBS — COMPLETED (Aug 15)

- ☒ **Elgato 4K X** — USB → streaming PC · gaming GPU **DisplayPort→HDMI → HDMI IN** · **Duplicate** display (not Extend) — **COMPLETED (Aug 15)**
- ☒ OBS **Gaming PC** source (Video Capture Device · Elgato 4K X) · live gaming desktop/game ✓ — **COMPLETED (Aug 15)**
- ☒ **NO SIGNAL fix:** gaming monitor sleep dropped Display 2 — set **never sleep** during setup · re-**Duplicate** restores feed — **COMPLETED (Aug 15)**

Stream Deck XL — COMPLETED (Aug 15) except Switch Profile

- ☒ **Stream Deck XL** — 5 m USB → **streaming PC** · **Stream Deck 7.5.1** installed — **COMPLETED (Aug 15)**
- ☒ Profile **PapaThaiGG Stream** created (Default profile left alone) — **COMPLETED (Aug 15)**
- ☒ **OBS Studio plugin** (Elgato Marketplace) installed · **WebSocket server** enabled in OBS — **COMPLETED (Aug 15)**
- ☒ **Button 1** → **Game only** OBS scene — **COMPLETED (Aug 15)** · working ✓
- ☒ **Button 2** → **Game + Pug** OBS scene — **COMPLETED (Aug 15)** · working ✓
- ☐ **Switch Profile** button (Default → PapaThaiGG Stream) — **NEXT (easy hardware #1)**
- ☐ Later Stream Deck: Pug mute · personality modes · vision toggle

Gaming PC stability (ongoing — not Elgato proven cause)

- ☒ USB selective suspend → **Disabled** — **COMPLETED (Aug 15)**
- ☒ NVIDIA control panel → **Prefer maximum performance** — **COMPLETED (Aug 15)**
- ☒ Gaming monitor → **100 Hz** — **COMPLETED (Aug 15)**
- ☐ **nvlddmkm.sys** / PAGE_FAULT crashes — watch over next sessions (7+ months history)

Optional polish (Phase D leftovers)

- ☐ Cable tidy (gaffer/ties) — **easy hardware #4**
- ☐ **Spout2** for Warudo transparency (replace Chroma Key later) — optional polish

Phase C — Smart co-host

- ☐ **Reliable path (main):** chat + Papa mic + Steam Deck + game hooks → Ollama → TTS → Warudo animation
- ☐ **Talk to Pug with mic** (Whisper/STT) — no typing
- ☐ **Personality modes** — voice command + Stream Deck buttons (see goals above)
- ☐ Chat → Ollama → TTS (Twitch/YouTube first)
- ☐ **“Pug, be quiet until I call you back”** — mute flag
- ☐ Walk on → talk → walk off (game or near Sal cam box)
- ☐ Pug **movement** / expressions in Warudo tied to speech
- ☐ Game reactions: hotkeys first → game hooks later
- ☐ **Vision experiment (optional):** AI watches game capture · Steam Deck ON/OFF toggle · GPU-heavy · fun to try · OK to disable
- ☐ Welcome / returning viewer memory in chat bot
- ☐ Stream Deck: personality buttons + backup hotkeys (not 32 manual macros forever)

Phase I — Package for streamers / VTubers to buy (optional · after Sal proves it)

Goal: Turn PapaThaiGG's working Pug stack into a **product other streamers can buy** — one-time or monthly TBD. **Already modular (good for packaging later):**

- ☒ `Pug_Brain.py` — brain + voice config at top of file
- ☒ `ModelFile` — personality (editable text)
- ☒ `Talk to Pug.bat` — simple launcher
- ☒ Checklist + master PDF — setup docs
- ☒ OBS + VB-Cable routing documented

Still needed before selling:

- ☐ Pug fun on **Sal's stream** for weeks (proof first)
- ☐ One-click or guided **installer** (Ollama · Python deps · VB-Cable check)
- ☐ **Settings UI** or simple config screen (voice · personality · OBS profile)
- ☐ **BYO VRM avatar** — buyer brings own body, our brain + voice + OBS template
- ☐ License + **Terms of Service** (TTS providers · stream use · no celebrity voices)
- ☐ Support docs / video walkthrough
- ☐ Pricing: one-time vs monthly · update channel
- ☐ See `AI_Stream_Cohost_App_Syllabus` in PapaThaiGG Plans folder

Phase H — Pugsan samurai (after Pug is fun on stream)

- ☐ Image → 3D (Tripo or similar) from T-pose art
- ☐ Blender rig + mouth shapes → **Pugsan.vrm**
- ☐ Load in Warudo; swap with robot for variety
- ☐ **Do not** block Pug's first live streams waiting on Pugsan

Stream layout notes

- **Sal cam corner:** you or Sal avatar; **you** toggle on/off for all viewers - Viewers **cannot** hide your cam individually on Twitch/YouTube - Pug can walk onto game **or** cam box area ---

SECTION 3 — Discord (PapaThaiGG server)

When to work on this: Phase E — after Pug is fun on stream. Server setup/audit can happen anytime at retired pace. **Brand goal:** Discord = squad hangout that matches **stream · website · Pug/Pugsan · social links** — fun first, teach Thailand/expat intel, zero cash-grab vibe. ---

How Mozart helps with Discord (what I can / cannot do)

Cursor cannot log into Discord. No AI (including me) can open your personal Discord account or browse your server on its own. Discord does not allow that — and there is no Discord connection in this project.

What I can do (very helpful — we use this all the time)

- Review **screenshots** you paste into Cursor (channels, roles, permissions, welcome flow, pins) - Review **copy you paste** (rules, welcome messages, channel topics, bot text) - Write **bot code** for Pug (Phase E) — you run it on your PC with your bot token - Suggest **channel**

names, categories, pinned posts, onboarding copy — PapaThaiGG voice - Audit **permissions & rank gates** from screenshots — “who can see what?” - Align Discord with **website · stream · Pug/Pugsan story · social links** - Build **checklists** like this one — you apply changes in Discord yourself

What I cannot do

- Log in as you or browse the server live - See messages, members, or settings unless **you share** them - Click buttons in Discord or change roles/channels directly - Read DMs or private channels you don't show me

What you do — so I can help Discord kick butt

When you want a review, send **one or more** of these in Cursor chat: | Share this | Why it helps | |-----|-----| | **Screenshot: full channel list** (left sidebar, categories expanded) | Map structure · spot overload · Pug placement | | **Screenshot: Server Settings → Roles** (role list + one role's permissions) | Rank gates · mod vs member · Pug bot role later | | **Screenshot: onboarding path** — #arrivals → visa reaction → #house_rules | Test what recruits actually see | | **Screenshot: #social_media_links_website** (or equivalent) | Match papathaigg.com + Twitch/YouTube/Kick links | | **Screenshot: welcome message** (Carl-bot or other) | Tone check · Pug “coming soon” wording | | **Paste: #house_rules** text | Family-friendly · English-only · squad vibe | | **Paste: pinned “how to rank up”** (if any) | Clarity for new members | | **Say what feels off** — e.g. “too many locked channels” or “recruits get lost” | I suggest fixes without guessing | **Tips for good screenshots:** one topic per screenshot · include channel name in frame · for permissions, show **role name + key toggles** · blur personal info if you want (not required for server structure). **Easy prompt when ready:** “Mozart, review my Discord — here are screenshots” + attach images. ---

Brand alignment — Discord ↔ everything else

Use this when auditing so the server feels like one PapaThaiGG world:

- ☐ **Website:** #social_media_links_website (or pin) lists **papathaigg.com** + same platforms as site footer (Twitch · YouTube · Kick · X · TikTok · Instagram · Facebook · Steam · Discord invite)
- ☐ **Stream:** clear “**Watch Live**” path — link to live page or “live now” pin when streaming (manual OK at first)
- ☐ **Pug (Phase E):** one home channel (#pug-lounge or Engine Room) · honest status: “Talk to Pug on stream now · Discord bot coming” until bot ships
- ☐ **Pugsan (Phase H):** tease in same area when samurai body ships — same brain, second mascot
- ☐ **Thailand / expat intel:** Field Guide & Expat Intel on site ↔ optional #travel-tips or Beer Garden threads (don't duplicate whole site — point to pages)
- ☐ **Tone:** fun squad · retired pace · teach & entertain · **no donation pressure** · matches website voice
- ☐ **Sal vs Pug:** you = PapaThaiGG human · Pug/Pugsan = AI mascots — never confuse in channel descriptions

What you built (looks great)

- Onboarding: #arrivals → #get_your_visa (passport → Recruit) → #house_rules - Carl-bot welcomes; social contract; English-only (translators later) - Rank progression: Recruit → Scavenger → Vanguard → Ranger → Gladiator → Paladin → Grandmaster - Themed categories: Visitor Center, Beer Garden, Muay Thai Ring, Squad Shack, Classified, etc. - #social_media_links_website · #the_local_legend · Engine Room · Suggestion box

Audit — permissions & leveling (when ready, no rush)

- ☐ Walk full onboarding path with a **test account** (fresh login)
- ☐ Confirm passport reaction still grants **Recruit**
- ☐ Confirm Carl-bot welcome + role assignment fire correctly
- ☐ Verify **locked channels** match intended ranks (padlocks = correct roles)
- ☐ Voice rooms: Front Porch · Island Radio · Elite Lounge · Barracks · Hypogeum · Colosseum — rank gates correct?
- ☐ XP / leveling bot (Carl-bot or other): document **how to rank up** in pinned post
- ☐ Moderator roles vs rank roles — who can ban, who can see Control Tower
- ☐ #house_rules and #arrivals copy still accurate (Pug mention OK as “coming”)

Optional later (Discord — gentle notes)

- ☐ **Pinned “How to rank up”** in #arrivals or #bulletin_board — what earns XP (chat, voice, posts, images)
- ☐ New recruits may feel **channel overload** — OK; onboarding path helps; consider a one-page map image
- ☐ #pug-lounge or use **Engine Room** for Pug AI bot chat when built
- ☐ **Pug Discord bot** → Ollama in selected channels (e.g. #the_long_bar_general_chat)
- ☐ Pug assists vibe per house rules — **not** auto-ban replacement for human mods
- ☐ Rate limits so Pug doesn't spam when always-on

SECTION 4 — Sal's personal avatars (you — not Pug)

Separate from Pug/Pugsan. Avatars that look like **you**, driven by **your** webcam/voice — mouth moves when **you** talk, follows **your** movement.

Vision

- Option alongside real webcam: Sal avatar in corner with Ao Nang jungle/window behind you - Hybrid (real eyes/mouth + 3D body) **or** full 3D likeness — phased over months - Used in OBS **Sal cam box** layer — independent from Pug layer

Possible stack (from your old roadmaps — pick when ready)

- **Hybrid:** Warudo + OBS + BRIO webcam + MediaPipe / Lens Studio mask - **Full face:** MetaPerson / FaceBuilder / Blender / MetaHuman (long-term) - **Not the same as Pug** — Pug uses Ollama; Sal avatar uses **your** face/body tracking

To do (later — no rush)

- ☐ Decide: webcam-only for v1 streams vs start Sal avatar path
- ☐ BRIO / cam setup for tracking if going hybrid
- ☐ Test OBS 3D Transform or Warudo body + face overlay
- ☐ Ao Nang window / jungle virtual background for Sal box
- ☐ Document in OBS which layer is **Sal** vs **Pug** (never confuse the two)

Aug 15 evening session — DONE ✓

1. Elgato 4K X dual-PC capture live · **Duplicate** display rule locked in ✓ 2. OBS **PapaThaiGG Game + Pug** collection · **Game only + Game + Pug** scenes ✓ 3. Warudo transparent over game (Chroma Key Sim 1 / Smooth 1) ✓ 4. Stream Deck XL on streaming PC · scene buttons 1 & 2 working ✓ 5. Voice audition bats fixed · **HFC Male** leading · rankings logged ✓ 6. Gaming PC stability tweaks (USB suspend off · NVIDIA max perf · 100 Hz) ✓ **Next session (when ready):** See **What's next** section at top — easy hardware first, then Phase C fun with Pug. ---

Notes (Sal edits here)

- Talk to Pug: Desktop **Talk to Pug.bat** only (skip Cursor terminal) - **USB Audio Device** = Sal's headset (YouTube + normal sound) - **Never** set Windows default output to CABLE Input — only route **Python** there - Warudo scenes are per-PC — redo Android on streaming PC - Booth ALPHA = no edit/re-export - Elgato 4K X live Aug 15 · gaming PC **Duplicate** always for capture · monitor **never sleep** during setup — **COMPLETED (Aug 15)** - Stream Deck XL on streaming desk · USB to **streaming PC** (not gaming PC) · Button 1 = Game only · Button 2 = Game + Pug — **COMPLETED (Aug 15)** - **Default TTS voice:** HFC Male Piper in **Talk to Pug.bat** — lock for viewers later (optional polish) - Mozart updates master PDF on Desktop + **PapaThaiGG Plans** + GitHub docs/ - **Personality buttons + voice modes** = Phase C (logged above — not forgotten) - **Ordered steps companion:** **PUG_PUGSAN_STEP_BY_STEP_BUILD** (Desktop PDF + repo docs) — safe after deleting old "Cursor work info" folder - Ollama local brain = correct MVP path (no paid API required)
