

Pug — Independent AI Co-Host Checklist

PapaThaiGG.com · Updated Aug 6, 2026 · GitHub: PapaThaiGG/docs/

Endgame (~1 month): Stream with friends/family — Pug live (Ollama brain + Warudo body + TTS). Two bodies, one personality: ALPHA robot first, Pugsan samurai pug upgrade in parallel.

Vision

- Independent AI co-host — chat, voice commands, in-game reactions
- Local Ollama brain · Warudo 3D body · TTS voice
- Robot (Booth VRM) for streaming now · Pugsan samurai pug built later
- Swap avatars for variety — same Pug personality

Stack

Layer	Tool
Brain	Ollama + Llama/Qwen (+ system prompt)
Voice	TTS (separate from Ollama)
Body	Warudo + .vrm (ALPHA, then Pugsan)
3D	Blender + VRM add-on 4.5.0

Done (Aug 6)

- Website mobile fix · Blender + VRM add-on · ALPHA imported in Blender
- Pugsan T-pose art found · Warudo ready · Ollama installing

Phase 0 — Prep

- ☐ Ollama + model · TTS · Warudo + ALPHA.vrm loaded · OBS layout

Phase 1 — Brain

- ☐ Pug Modelfile/prompt · 1–2 sentence replies · test with game open

Phase 2 — Robot in Warudo

- ☐ Load ALPHA.vrm · TTS speaks · lip/expressions · OBS test
- ☐ Do not edit Booth robot (license)

Phase 3–5 — Chat · Voice · Game reactions

- ☐ Chat → Ollama → TTS · rate limit · mute toggle
- ☐ Push-to-talk commands for Sal
- ☐ Hotkey game reactions (shot, clutch, wipe)

Phase 6 — Pugsan samurai (parallel)

- ☐ Image → 3D · Blender rig · mouth shapes · Pugsan.vrm · Warudo

Phase 8 — First stream

- ☐ 30 min dry-run · emergency stop · stream with squad

Next now: Launch Warudo → import D:\PTGG\ALPHA.vrm → then finish Ollama.

Notes: D:\PTGG\PugAI\ · Pugsan art in PapaThai Mascot Files · Ask Cursor to refresh Desktop PDF when updated.
