

PapaThaiGG — Pug Project Master Guide

For Sal (PapaThaiGG) · Streaming PC setup · Updated August 9, 2026 (late evening — packaging + Warudo notes)
Mozart + Sal · Open this PDF when you forget — goals, order, paths, and what’s next.

Best way to stay least confused:

- 1) **Talk to Pug** → double-click Desktop Talk to Pug.bat (NOT Cursor terminal)
- 2) **Website edits** → Cursor, open folder PapaThaiGG_Brand_Cursor_GitHub_Website_AI_All
- 3) **Warudo / OBS / Steam** → normal apps (not terminal)
- 4) **This PDF + PapaThaiGG Plans folder** → your memory backup

Cursor terminal red errors? Usually wrong folder, or pasted two commands on one line, or pasted Mozart’s explanation text by accident. Use Talk to Pug.bat instead — no paths to remember.

1. Where everything lives (one map)

Pug brain & personality (HOME BASE)

What	Full path on streaming PC
Talk to Pug (easiest)	C:\Users\randy\OneDrive\Desktop\Talk to Pug.bat
Pug_Brain.py	C:\Users\randy\OneDrive\Desktop\App ideas\PTGG\PugAI\Pug_Brain.py
Modelfile (personality)	...\PTGG\PugAI\Modelfile
Quick text cheat sheet	...\PTGG\PUG_HOME.txt
ALPHA.vrm (Android body)	C:\Users\randy\OneDrive\Desktop\App ideas\PTGG\ALPHA.vrm
All PTGG project files	C:\Users\randy\OneDrive\Desktop\App ideas\PTGG\

Website & GitHub

What	Where
Website folder (Cursor)	C:\Users\randy\PapaThaiGG_Brand_Cursor_GitHub_Website_AI_All\PapaThaiGG\
Live site	https://papathaiagg.com
GitHub repo	github.com/rdongoodman/PapaThaiGG
Checklist in repo	...\PapaThaiGG\docs\PUG_AI_COHOST_CHECKLIST.md

PDF plans & older roadmaps

What	Where
This master guide (PDF)	Desktop + PapaThaiGG Plans\00 - PUG PROJECT MASTER GUIDE (Sal).pdf
All other plan PDFs	C:\Users\randy\OneDrive\Desktop\PapaThaiGG Plans\

Apps (installed on streaming PC)

App	Status	Notes
-----	--------	-------

Ollama + model Pug	Ready	Starts with Windows
Python 3.12	Ready	Runs Pug_Brain.py
VB-Cable	Installed	Pug voice → OBS later
OBS 32.x	Installed	Phase B
Warudo (Steam)	Installed	Load ALPHA.vrm — Phase B
Streamer.bot	Later	Chat → Pug (Phase C)
Elgato 4K60	On desk — not plugged in yet	Dual-PC hookup (after Phase B)

2. Two PCs — who does what

	Gaming PC	Streaming PC (YOU ARE HERE)
Job	Play game → capture out	Pug / AI / Warudo / OBS
CPU	i9-12900KF	i9-10900KF
RAM	32 GB DDR5 (→ 64 later)	64 GB DDR4
GPU	RTX 3080 Ti	RTX 3080
Hostname	DESKTOP-JCVJ6HR	RANDYS_PC_TH

Pug's **real home** is the streaming PC. Gaming PC = games only when dual-PC is live.

3. Sal's goals (vision — in build order)

One Ollama brain · two bodies (**Pug** Android + **Pugsan** samurai) · **wholesome** personality · same AI everywhere we can place it.

Goal	What Sal wants	When (phase)
Stream co-host	Pug on Twitch/YouTube over game; corner mascot; optional Sal cam off = game + Pug only	Now — Phase B
Discord	Anyone can talk to Pug anytime in server; later DMs one-on-one	Phase E (after stream works)
Website	Chat widget on papathaiagg.com / Meet Pug — talk anytime; 3D on web is hard, text/voice first	Phase F
Remember viewers	Pug remembers who visited stream, Discord, website; welcome back: <i>"Where you been? 30 days, 2h, 16m..."</i>	Phase G
Private messages	One-on-one with users (Discord DMs, website chat); platform limits on Twitch/FB/X	Phase G (with memory)
Global stream shout	When a returning viewer joins live, Pug says hi on stream (TTS)	Phase C + G
Pugsan	Second body, same brain — samurai pug humanoid	Phase H
Sell product	Package for other streamers/VTubers — one-time or monthly TBD · <i>not priority</i>	Phase I (after proof on Sal's stream)

Social media bots	Facebook/X etc. — platforms restrict bots; unlikely full Pug · maybe later	Optional / low
-------------------	--	----------------

Build order is locked — do NOT skip ahead:
Stream (Warudo+OBS) → chat on stream → Discord bot → website chat → viewer memory → Pugsan → sell later.
Streaming first *proves* Pug before we put him everywhere.

4. What we’ve DONE (Aug 9, 2026)

- ✓ Chose Ollama as free local AI brain (right path for you)
- ✓ Streaming PC: Python 3.12, Ollama, llama3, custom Pug model
- ✓ Refreshed Modelfile → wholesome co-host (warm, family-friendly)
- ✓ Fixed Pug_Brain.py — Pug talks on screen + out loud
- ✓ VB-Cable installed
- ✓ Desktop shortcut: Talk to Pug.bat
- ✓ ALPHA.vrm on disk · Warudo installed on Steam
- ✓ OBS installed
- ✓ Website live at papathaigg.com (separate track)
- ✓ Warudo: Pug (Android) loaded · Orbit camera · Focus Character set · zoom works
- ✓ Transparent background ON · Render Environment OFF · black = transparent for OBS
- ✓ Scene saved: Pug (Android)
- ✓ OBS: Window Capture → Warudo · Pug in corner
- ✓ Wholesome personality rebuilt · Papa nicknames locked (not “Sal”)
- ✓ **Pug voice works** — CABLE routing + OBS Monitoring · Aug 9 late evening
- ✓ Identity fix — Pug speaks as Pug (*“Hey Papa T, Pug here...”*)
- ✓ Master guide PDF + GitHub docs synced

5. What we’re doing NOW

Phase B — DONE ✓ · Pug talks in OBS + headset.
Next up (Phase C): nicer TTS voice · nickname % tuning · chat/mic · Stream Deck · game hooks.

6. Full roadmap — phases in order

Phase A — Brain DONE

- Ollama · llama3 · custom Pug model · wholesome Modelfile
- Talk to Pug.bat on Desktop

Phase B — Body on stream IN PROGRESS

- Warudo: ALPHA.vrm · Pug (Android) · transparent BG · scene saved
- OBS: Window Capture → Warudo window · small corner
- OBS: Audio Input Capture → CABLE Output for Pug voice
- Scene presets: Cam+Game+Pug · Game+Pug (no cam) · Game only

Phase C — Smart stream co-host

- Streamer.bot: Twitch/YouTube chat → Ollama → TTS
- Talk to Pug with mic (Whisper/STT) · personality modes · Stream Deck buttons
- Game event hooks → Pug reacts + Warudo animations (dance, slump, hype)
- **Vision experiment (optional):** AI watches game · Steam Deck ON/OFF · GPU-heavy · fun to try later
- “Pug, be quiet” · walk on / walk off · rate limits

Phase D — Dual-PC + Elgato

- Game PC out → Elgato → streaming PC OBS (after Phase B solo works)

Phase E — Discord (Pug everywhere #1)

- Pug bot in #pug-lounge or Engine Room — same Ollama brain
- Text chat first · optional DMs one-on-one
- Rate limits · family-friendly · not a replacement for human mods

Phase F — Website chat (Pug everywhere #2)

- Meet Pug page widget — talk to Pug anytime
- Honest online/offline status · 3D avatar on web = optional later

Phase G — Viewer memory & welcome-back

- Remember users across stream + Discord + website (one profile per person)
- Last-seen tracking · global welcome: *“Good to have you back — it’s been X days...”*
- Private messages where platforms allow (Discord DMs, site chat)
- Returning viewer → Pug speaks on live stream (TTS)

Phase H — Pugsan samurai body

- T-pose art → 3D → rig → Pugsan.vrm · swap body in Warudo · same brain

Phase I — Product for streamers / VTubers (optional · low priority)

- Only after Pug is fun on **Sal’s** stream for weeks
- **Package goal:** sell AI co-host toolkit — brain + voice + OBS/Warudo template · BYO VRM avatar
- Modular now: Pug_Brain.py · Modelfile · Talk to Pug.bat · docs/PDF
- Later: installer · settings UI · license/ToS · one-time or monthly pricing
- Attitude/personality editor (Modelfile made friendly)
- See AI_Stream_Cohost_App_Syllabus in Plans folder

Warudo — MediaPipe Tracker (Pug co-host)

Not needed for Pug tonight — Pug uses Ollama + TTS, not your webcam. Closing the tracker *window* makes it pop back; disable the **MediaPipe Tracker asset** in Editor → Assets tab → uncheck Enabled (or Show Camera) → Save Scene.

When you return — voice fix (Step 3)

1. OBS → replace Pug Voice with **Audio Input Capture** → **CABLE Output**
2. Ask Pug a question in Talk to Pug.bat · meter should move · enable Monitor to hear

7. How to talk to Pug (every time)

Easiest: Desktop → double-click Talk to Pug.bat
Type your message · Enter · Pug replies · type quit to exit.

Do NOT run Pug from Cursor’s terminal unless you cd to PugAI first — the bat file avoids that confusion.

8. Warudo — saved scene

- Scenes are **per PC** — redo on streaming PC (not copied from gaming PC)
- VRM file: ... \PTGG\ALPHA.vrm
- Booth ALPHA license = view/use, no re-export from Blender
- Pug = corner mascot, not full screen
- Scene file: **Pug (Android)** — open via Warudo menu (paw icon) → Open Scene

9. Cursor chats & doc updates

Cursor chats are tied to each PC and project folder — they don’t auto-sync between machines.

- **Streaming PC / this project:** PapaThaiGG streaming setup chat (Mozart + Sal, Aug 9 2026)
- **Gaming PC:** earlier Pug build chat (prototype brain work)
- If a chat disappears: open same project folder in Cursor · or ask Mozart to summarize from this PDF
- If chat gets too long or you start fresh: say **“update master guide PDF”** — Mozart syncs Desktop + Plans + GitHub

10. Other PDFs in PapaThaiGG Plans

- 01 - PapaThaiGG Master Checklist... — website, Discord, Pug, Sal avatars
- 03 - Project Roadmap - Pug the AI Co-Host.pdf
- 13 - MASTER ROADMAP - PapaThaiGG Stream Build.pdf
- 15 - Pugsan AI Mascot Build.pdf
- VRAM math, deployment roadmaps, etc.

This PDF (00) is the one to open first — it’s the current “where are we” sheet.

11. Pug’s personality & nicknames

Wholesome, warm, family-friendly — fun co-host energy, not mean sarcasm. Pug calls you **Papa** names — never **Sal** (Sal is Mozart-only).

Nickname Bible

When	Names
Primary (most replies)	Papa · Papa Thai · Papa T
Secondary (hype / wins / funny)	PT · Big guy · Boss · Chief · Pops
Rare	Khun Papa (Thai respect)
Pugsan only — occasional Japanese	Papa-san · Bossu · Chifu · Aniki · Denka-sama (Honored Papa) · Khun Papa

Never	Sal · old man · grandpa · geezer · elder · dude
-------	---

Edit `Modelfile`, then run `ollama create Pug -f Modelfile` (from PugAI folder, or ask Mozart).

Game awareness — what’s truly possible

Level	How Pug “knows”	When
Easy ✓	Chat · your voice · Stream Deck button you press	Phase C
Medium ✓	Game hooks/APIs for specific games	Phase C–D
Animations ✓	Warudo dance/sad/hype — fired by any event above	Phase C
Hard △	AI “watches” game video — experimental, not reliable alone	Future test

Pug won’t auto-react to a fight loss *with zero setup*. We wire **event pipes** (chat, voice, hotkeys, game signals) → Ollama → TTS → Warudo animation. That’s how victory dances and “nice try, Boss” become real.

Vision experiment — “watch the game” (future · optional)

Fun to try · not for tonight. AI vision on game capture — slow, GPU-heavy, may not work well. OK to disable if flaky.

Steam Deck toggle: tap ON before a big fight → Pug/Pugsan watch screen and may react · tap OFF when done — *not on all the time* (saves GPU). Works alongside chat/mic/hooks, not instead of them.

Future personality modes

- Voice: “Pug, funny mode” · “Pug, wholesome mode”
- Stream Deck: one button = one personality (32-button deck)

Nickname usage percentages (tune later)

Name	Starting target
Papa	~40% of primary uses
Papa Thai	~35%
Papa T	~25%
Secondary (PT · Big guy · Boss · Chief · Pops)	~15–20% of all replies (hype moments)
Khun Papa	~2–5% rare

Adjust after live testing with Mozart. **One TTS voice** on stream (upgrade from robotic David later — Edge TTS / Piper options).

12. When stuck

1. Open this PDF
2. Check: am I in the right folder for what I’m doing?
3. Pug? → `Talk to Pug.bat`
4. Website? → Cursor + PapaThaiGG repo folder
5. Ask Mozart: “where are we?” or “ready for [next step]”

PapaThaiGG · Pug first, then Pugsan · Fun first, retired pace · Mozart + Sal

Ask Mozart: **“update master guide PDF”** when goals or milestones change.
