

Pug — Independent AI Co-Host & Mascot Checklist

Project: PapaThaiGG.com / Pug | **Updated:** August 6, 2026

Local independent AI co-host: 3D avatar on stream, reacts to chat & in-game moments, takes commands, talks or types back.

Vision (Sal's)

- Pug is an **independent AI co-host and mascot**, not a passive overlay.
- **Body:** 3D avatar (current shell + optional second Warudo avatar).
- **Brain:** Local LLM via Ollama on the streaming PC.
- **Personality:** Sarcastic, tactical, Thailand Base Camp energy.
- **Listen:** Chat + voice commands from Sal.
- **Speak / type:** TTS and/or on-stream chat replies.
- **React to the game:** e.g. get shot → Pug freaks out / comments.
- **Website:** papathaigg.com “Meet Pug” tells the story.

Recommended stack

Layer	Recommendation	Notes
Brain	Ollama + Llama 3.1 8B or Qwen2.5	Dolphin optional; strong system prompt often enough
Mouth	Warudo + TTS	Lip-sync later
Chat ears	Chat bridge → Ollama → TTS / typed reply	Twitch first
Voice ears	PTT / wake word → STT → Ollama	After chat works
Game reactions	Streamer.bot / hotkeys first	Deep game hooks = later
Control	Mute / panic button	Always have a kill switch

Build order: Chat reactions → Voice commands → Game-event reactions.

Phase 0 — Prep

- ☐ Confirm GPU/VRAM budget for Ollama + game + Warudo
- ☐ Install / update Ollama; pull base model (+ optional Dolphin)
- ☐ Write Pug system prompt (tone, short replies, stream rules)
- ☐ Choose primary chat platform; Warudo project ready
- ☐ Decide if a second Warudo-optimized avatar is needed

Phase 1 — Brain online

- ☐ Ollama answers with Pug's prompt from a terminal

- ☐ Cap replies to 1–2 sentences for live play
- ☐ Save winning model + prompt in config/notes

Phase 2 — Avatar body (Warudo)

- ☐ Avatar loads; idle/talk/react mapped; TTS voice chosen
- ☐ OBS layout keeps Pug visible without covering critical HUD
- ☐ Optional second avatar for Warudo-only look

Phase 3 — Chat co-host

- ☐ Read live chat; filter spam; rate-limit replies
- ☐ @Pug / trigger words for direct questions
- ☐ Spoken TTS path + optional typed chat path + mute toggle

Phase 4 — Voice commands

- ☐ Push-to-talk Sal → STT → short spoken confirm
- ☐ v1 commands: read that / hype / quiet / what did chat say

Phase 5 — In-game reactions

- ☐ Hotkey / Streamer.bot events first (death, clutch, wipe, etc.)
- ☐ Preset lines + light LLM paraphrase
- ☐ Deeper game-state hooks only after that; never tank FPS

Phase 6 — Website & brand

- ☐ Meet Pug page matches real capabilities
- ☐ Mobile hero/buttons stay readable (Aug 6, 2026 pass)

Phase 7 — Stream-ready polish

- ☐ 30+ min dry-run; temps/FPS OK; emergency stop documented
- ☐ Backup if Ollama dies (silent avatar or canned lines)

Next one thing: Install Ollama → lock Pug's system prompt → wire one chat source to a spoken Warudo reply.

Notes (Sal)
